

OPEC CBRNe's FAMILY OF SUITS

Choosing the right suit for the threat is important. OPEC CBRNe has developed a family of suits which provide optimal protection for wearers in a variety of threat environments.

MEET THE FAMILY:

Kestrel/Falcon

- Kestrel (two piece) and Falcon (one piece) are lightweight suits providing 24-hour chemical warfare protection
- High comfort afforded by good air permeability and breathability
- Exceeds NATO AEP 38 standards
- Selected by Australian DoD for its Land 2110 acquisition programme

Phoenix

- Achieves ultra-high end user comfort due to its high air permeability
- Extremely lightweight
- Meets NATO AEP 38 standards

Kite

- Two-piece suit which offers aerosol protection while retaining air permeability
- More conformant fit than traditional systems
- Roll-in hood for greater operational flexibility

Cetan

- Highly protective robust medium weight protection suit
- Utilises a new carbon technology
- Exceeds NATO AEP 38 standards

Viper-Type 4

- One-piece protection against contaminated liquids, aerosol particulates, blood and blood borne pathogens, and viruses such as COVID-19
- Breathable and comfortable
- Launderable 30 times

Osprey

- Light and flexible carbon undergarment option
- Available in a range of configurations
- Offers chemical warfare protection when utilised as part of a system
- Ideal covert option when paired with an operational uniform or business suit

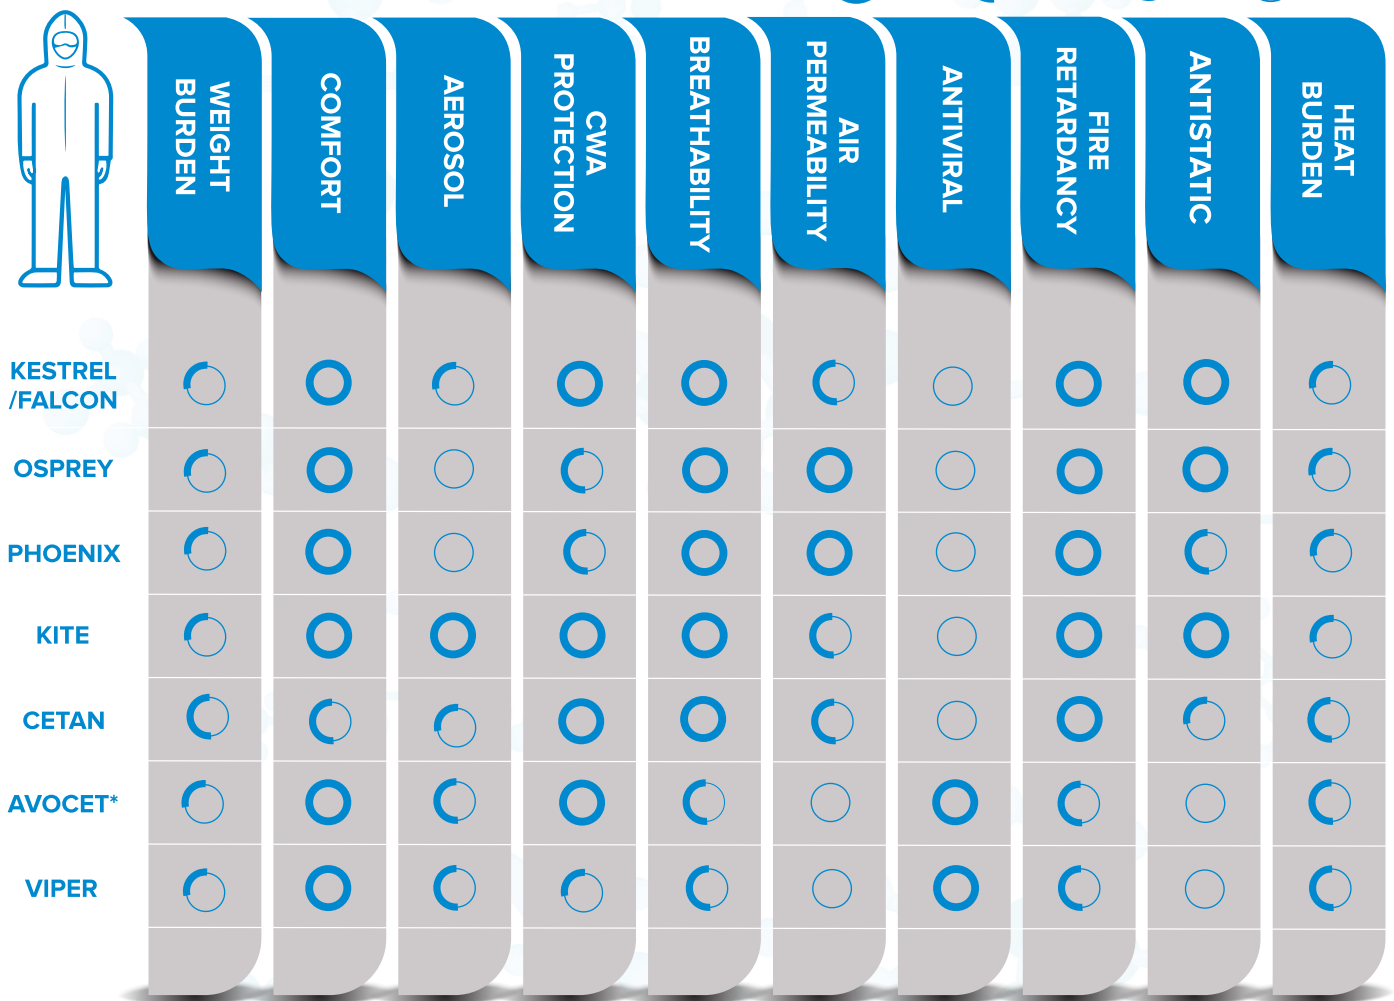

Avocet*

- Layered CBRN protection system
- Allows the user to match the protective system to the threat situation
- Optimises comfort at lower threat levels but additional layers offer protection against a wider range of scenarios

OPEC CBRNe

OPEC CBRNe is a UK-based operation established by OPEC Systems in 2017 to refine and improve the former Remploy technology. That is important because when making life-saving products, experience matters.

We are leading designers and manufacturers of the most advanced lightweight Level C CBRN Protective Clothing, applying the latest materials and a range of advanced construction techniques to deliver exciting new innovations in suit design.

We have improved the designs of key products to ensure they stay relevant to current threats but push the boundary of reducing thermal burden. We do this because as an end user or potential distributor, we want you to have the right balance of protection and comfort.

Organisations across the world, such as the UK MoD, UK Police and Australian DoD, choose our suits because of the reassurance of our 50+ years' pedigree in CBRN, depth of experience to create the most innovative products and the way OPEC CBRNe embrace corporate social responsibility as part of our operations.
